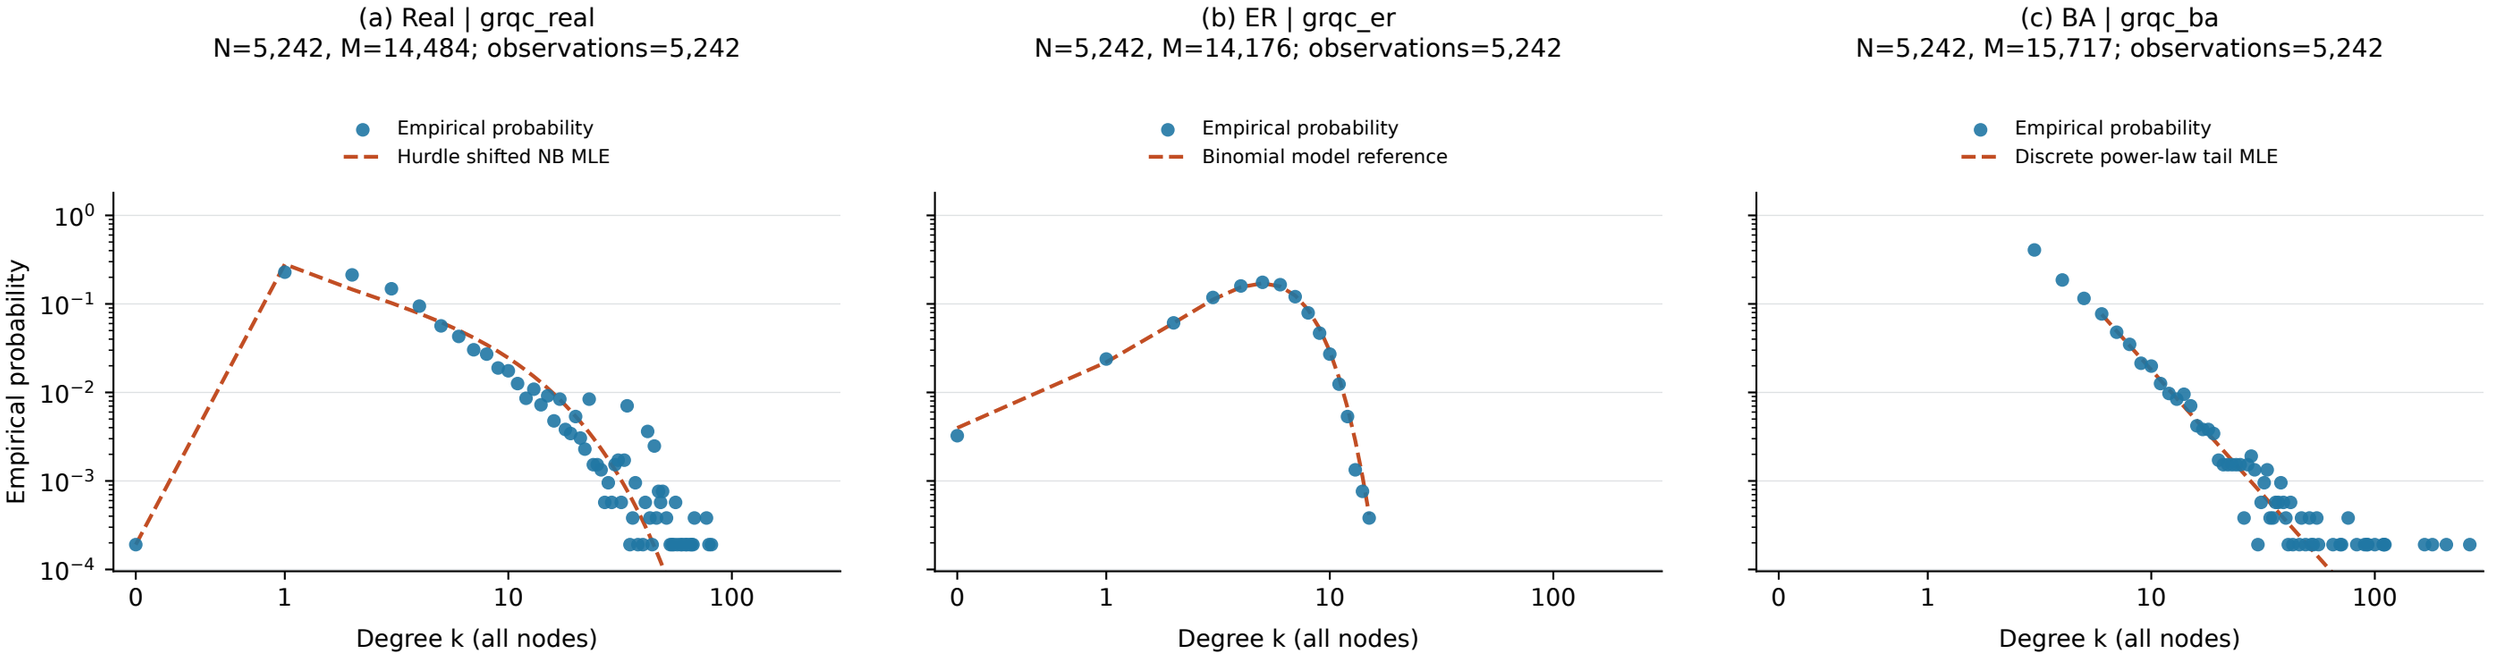
ca-GrQc | Degree distribution



Hurdle shifted NB MLE; KS=0.076.

Binomial model reference; KS=0.024.

Discrete power-law tail MLE; KS=0.010. xmin=6, tail n=1527, power-law alpha=2.83.

Discrete PMF = count / observations; component observations are unweighted components, not nodes. Zero-valued observations are retained; empty-frequency bins are saved but not drawn on logarithmic y axes. Fits/smoothers are descriptive, not significance tests.
