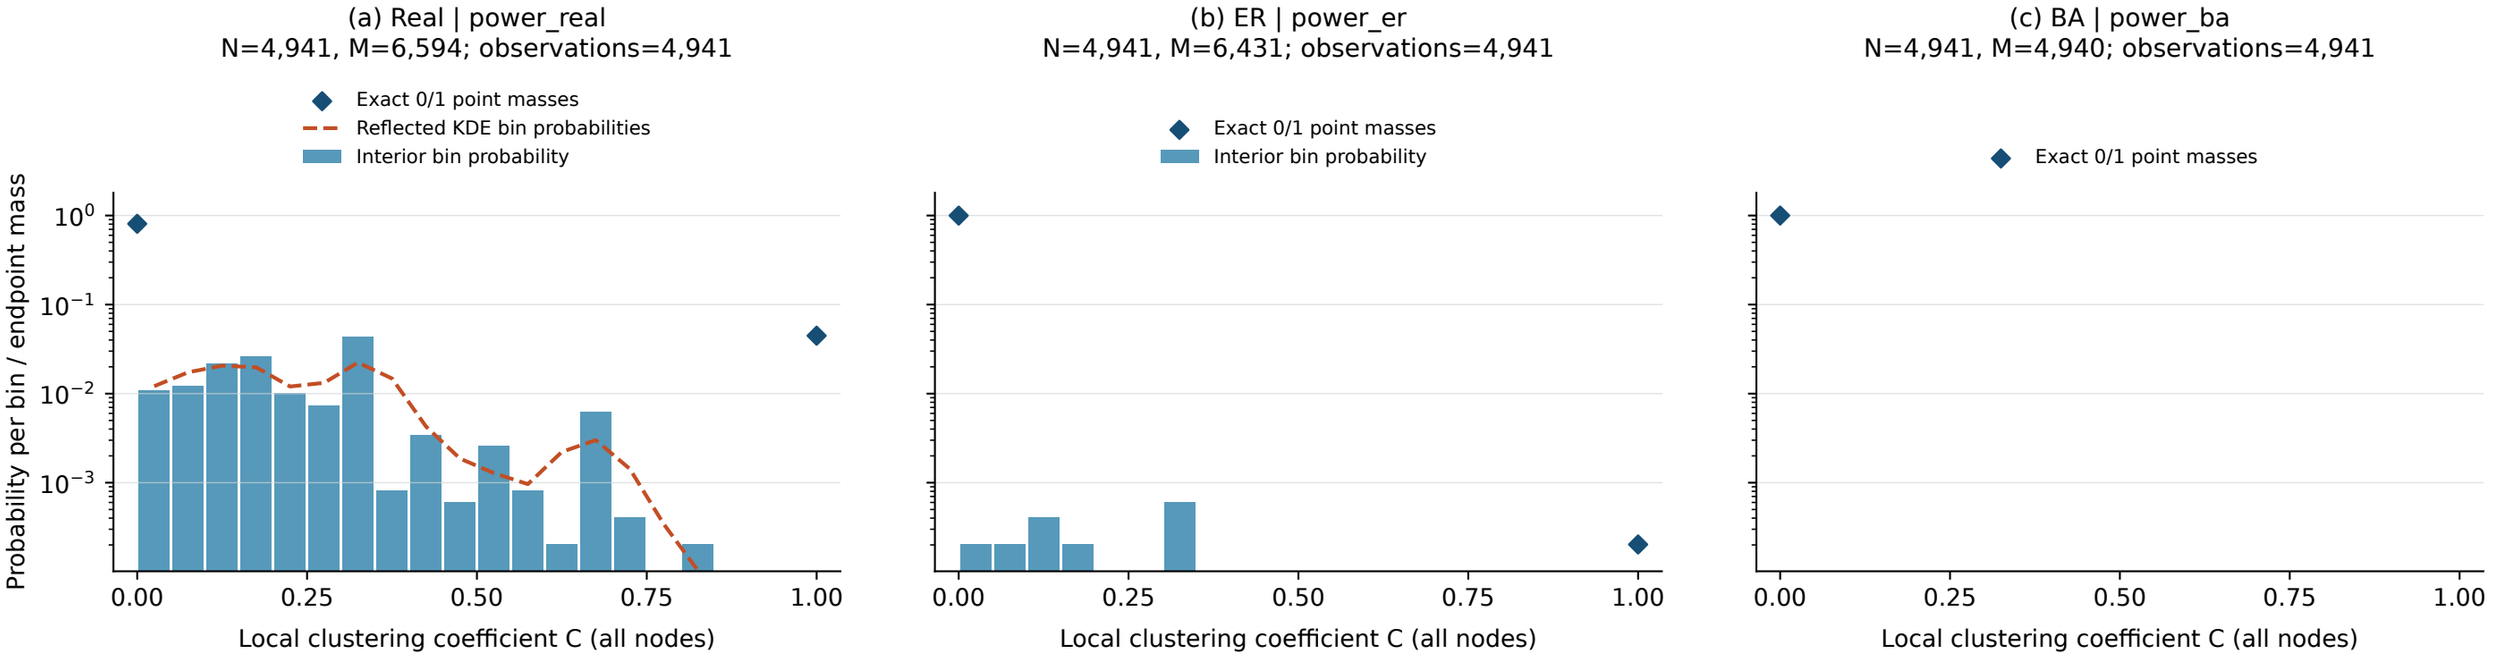
# Western States Power Grid | Local clustering coefficient distribution



Reflected KDE bin probabilities; KS=0.151. Endpoints are separate point masses.

Fit N/A: Only 8 interior observations; endpoint atoms retained, no stable continuous fit.

Fit N/A: Only 0 interior observations; endpoint atoms retained, no stable continuous fit.

Clustering: 20 equal-width interior bins; exact C=0 and C=1 masses are separate. Curves integrate fitted probability over each bin. Zero-valued observations are retained; empty-frequency bins are saved but not drawn on logarithmic y axes. Fits/smoothers are descriptive, not significance tests.
