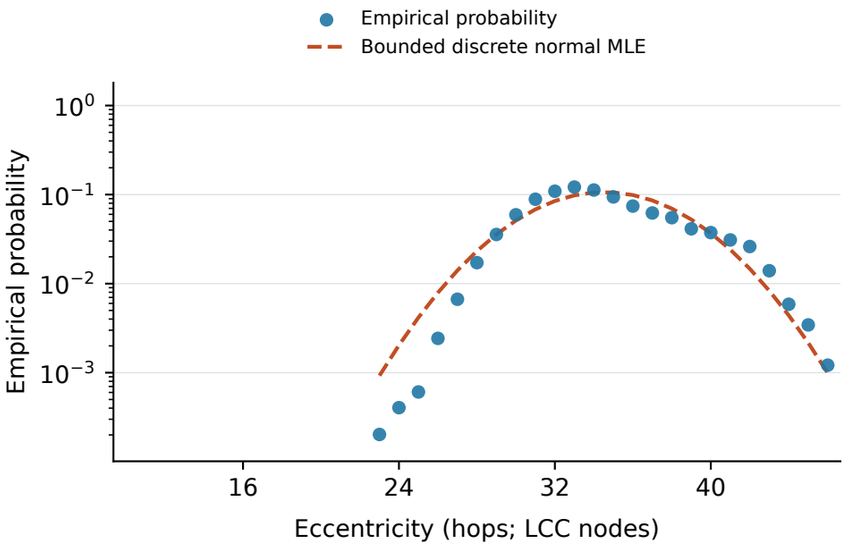
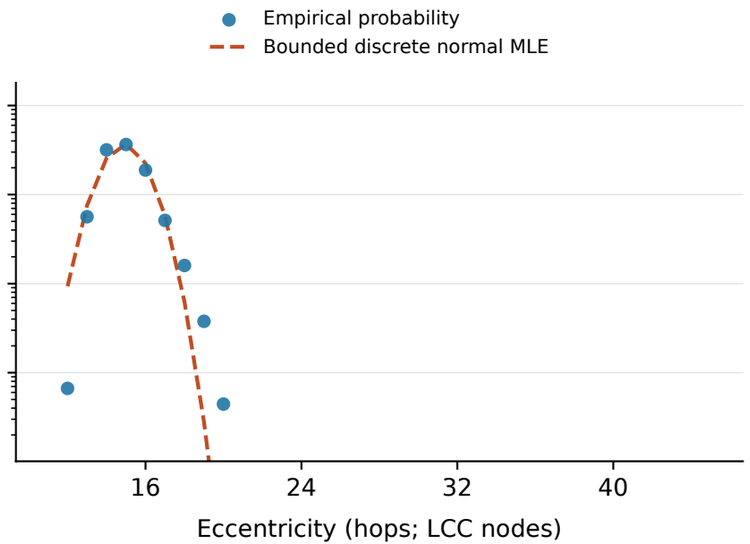
Western States Power Grid | Eccentricity distribution

(a) Real | power_real
N=4,941, M=6,594; observations=4,941



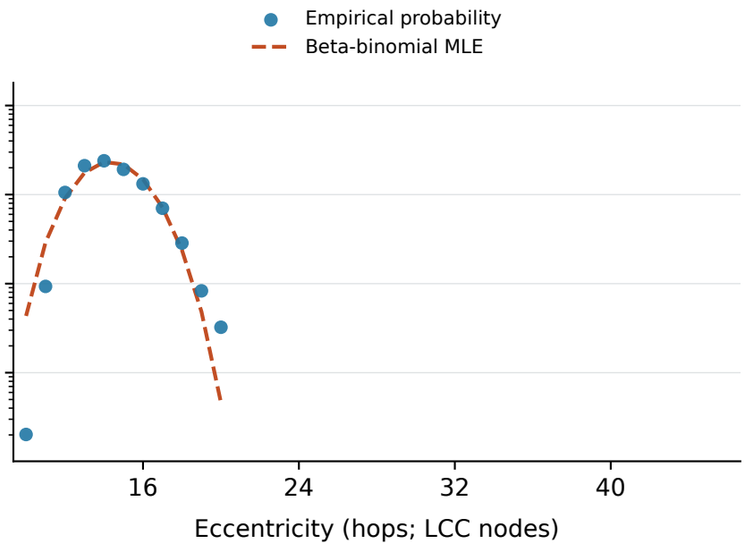
Bounded discrete normal MLE; KS=0.059.

(b) ER | power_er
N=4,941, M=6,431; observations=4,504



Bounded discrete normal MLE; KS=0.033.

(c) BA | power_ba
N=4,941, M=4,940; observations=4,941



Beta-binomial MLE; KS=0.034.

Discrete PMF = count / observations; component observations are unweighted components, not nodes. Zero-valued observations are retained; empty-frequency bins are saved but not drawn on logarithmic y axes. Fits/smoothers are descriptive, not significance tests.
